

Forms Exercises

Exercise time: 40 minutes

Register Screen

Build a screen for registering a new user. This screen is very similar to the login screen, so I decided not to show you in class. It's very repetitive and a waste of time.

You can find the completed code in the [Fini github repo](#) after this Exercise is marked as closed.

Organize Components

Move the following components to **/components/lists**. Render each of the screens we've built so far to make sure they work correctly.

- ListItem
- ListItemDeleteAction
- ListItemSeparator
